

## **TX-12™ SPECIAL TASK WEAPON™ DEBUTS AT SHOT SHOW**

**RANCHO CUCAMONGA, CA — January 16, 2012**

The TX-12 Special Task Weapon™ (STW) is the latest product release for law enforcement and military applications from Ten-X Tactical™. “The TX-12™ is the industry’s first and only underslung, double action, ambidextrous, 12ga shotgun system that maintains Primary Weapon Readiness (PWR),” said Richard Pumerantz, PhD, President of Ten-X Ammunition, Inc.. “Weighing less than 1 kilo, it is the world’s lightest 12ga STW ever created for mounting under a primary rifle.

With military demands for significant weight reductions and increased operator safety, and tactical law enforcement’s need for flexibility in dynamic environments, the TX-12™ was envisioned and created. The TX-12™ accepts up to 3 inch 12ga magnum rounds, and can also fire all forms of less lethal 12ga rounds, such as beanbags, flash bangs, chemical, flares, and electronic stun devices.

Operators get more than just 12ga breaching, lethal, less lethal capabilities. They’ll have increased safety by ensuring that PWR is maintained while using the TX-12™. Operators will never again transition away from their primary weapon.” Reduced operator fatigue results from the weight reduction, allowing the operator to use their weak hand to operate the TX-12™ and increasing operator safety by maintaining PWR. Reduced training costs are realized from similarities to using existing weapons, common use of primary weapon sights, and the simplicity of the quick release mounts. The low profile design also preserves the popular CQB tactical hold ahead of the magazine well.

The single shot loading system gives the operator the flexibility to quickly react in a dynamic environment. Whether the situation calls for a door breaching round, a flash bang, or a less lethal round, the operator has the control to make the decision and load the appropriate round for that threat. No need to empty a tube or change magazines. Simply open the breech and load the suitable round.

Some of the unique TX-12™ features include: the Fire Control Module (FCM) that holds the trigger group assembly and enables easy field servicing by removing a single captive takedown pin; ambidextrous loading, double action (DA) trigger, and a simple T-lock to open the breech; no dismounting required to field service the primary weapon; and, replaceable mil-spec barrel standoff device (BSD) for effective door breaching.

The TX-12™ mounts in the standard M203/M320 style configuration, or can be rail mounted with the optional MIL-STD-1913 rail mount kit. Both mounting configurations have quick release hardware for solid mounting and easy dismounting in just seconds. The 10.5 inch barrel is standard configuration for the M4/M4A1 type platform with a 14.5 inch barrel. An extended length BSD is available for 16 inch M4 barrels.

When configured with its 7.5 inch barrel, the TX-12™ becomes the perfect complement to a 10 inch short-barreled or bull pup style platform for CQB situations.

The TX-12™ can also be customized to meet specific requirements by contacting Ten-X Tactical.

Ten-X Tactical™ is a division of Ten-X Ammunition, Inc.
