

TX-40™ Reloading Press for 40mm Less Lethal

The TX-40™ Reloading Press and Propelling Charge System was designed for 40mm less-lethal launching systems that utilize reusable projectiles. The TX-40™ is easy to use, requires minimal training, and comes with a Lifetime Warranty!

The Propelling Charges designed by Ten-X Ammunition, Inc. utilize a smokeless .38 caliber blank charge which is unique to the casing brand to be reloaded. The pre-loaded blanks, and burst disks for Defense Technology, offer an efficient powder burn with consistent muzzle energy and velocity. Rounds can be reloaded in seconds.

The TX-40™ enables law enforcement to cost effectively reload their 40mm less-lethal training rounds that replicate duty round performance. New 40mm rounds can cost \$25 each, most remanufactured training rounds cost \$13 each, and even used primed casings cost \$4 each. As a result, many departments limit their training to a couple of rounds per year. The TX-40™ reloading system provides law enforcement a simple solution to increase 40mm training while decreasing training costs to about *\$1 per shot*.

Even the new Expander Die will save money by reforming dented aluminum case mouths. About 25% of cases are discarded because of dented case mouths. The Expander Die pays for itself after the first 60 dented casings are salvaged.

The TX-40™ is extremely durable, requires minimal maintenance and comes with a Lifetime Warranty.

When ordering, specify the manufacturer of the rounds to be reloaded (i.e., Defense Tech, CTS, or ALS).
